

Isabel 6

A summary of what's new in 1.7 bis

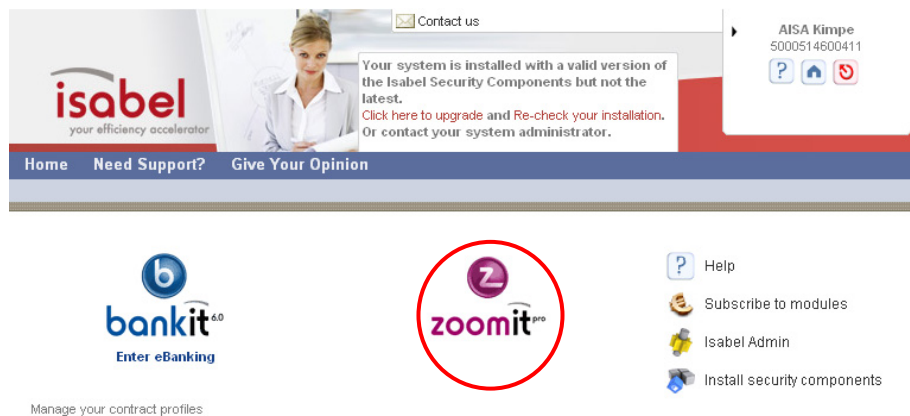

Dear Isabel User,

Version 1.7 bis features a whole range of technical improvements. We have ironed out a lot of bugs and the performance of some components has been enhanced significantly.

There are also a number of new features that you will see immediately in your user interface:

Possibility of receiving digital invoices via Zoomit Pro in your Isabel 6 environment

When you go to the Isabel portal site, you will now see the Zoomit Pro logo. Over the course of time, Zoomit ^{pro} will become the collection location where you can receive, view, archive and pay your invoices and/or other documents electronically in your Isabel 6 environment.

Clicking on the Zoomit logo takes you straight to the Zoomit Pro work environment.

Today you won't see any Isabel invoices (for your Isabel 6 subscription) waiting for you in this application. That's because Isabel 6 services are not being invoiced during the Discovery phase. For your information : you will continue to receive your monthly Isabel invoices for Isabel Business Suite 5.0 electronically in your Isabel Business Suite 5.0 environment, not in Isabel 6. But large senders of invoices are in the process of preparing to send out digital invoices and/or other documents to your Isabel business-to-business environment in Isabel 6.

You will of course be notified when digital documents start being sent to Zoomit Pro in your Isabel 6 environment.

Improved file upload

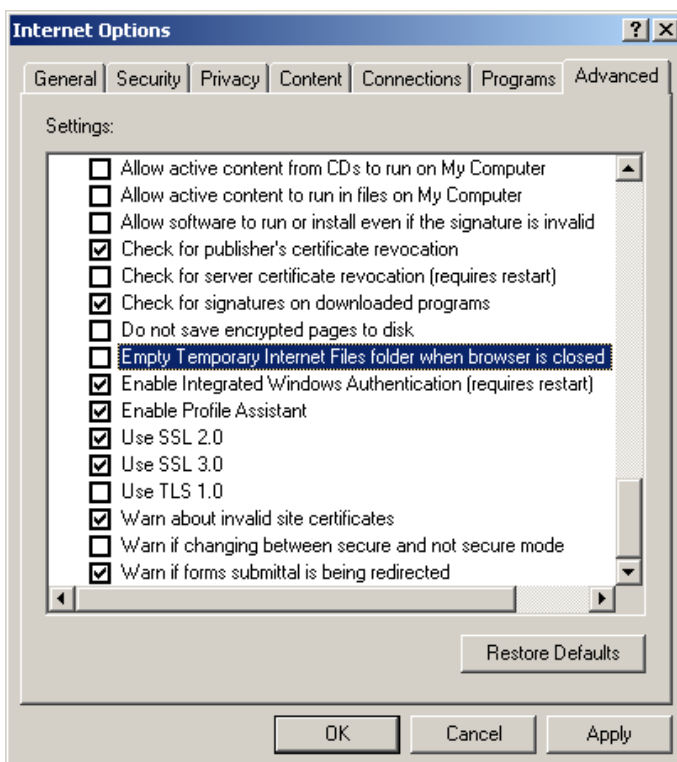

Uploading files has become more fluid thanks to a series of technical improvements. Format recognition, conversion and validation are now optimum when uploading. It is possible to upload larger files. To increase the performance of the application, details of files containing more than 500 payments cannot be viewed. Thanks to the hashcode you can be sure that your larger files have not been modified while being exported from your accountancy/ERP program to Isabel.

The exchange of data between your accountancy program and Isabel 6 is protected against any fraudulent manipulation via this hashcode. If your accountancy/ERP program allows the hashcode to be displayed, you can see that code in Isabel 6 when signing the files. To display or hide the hashcode go to the *Preferences* menu and choose the Transactions tab.

Closed accounts will remain visible in Isabel 6

Some Isabel customers (such as notaries and law practices) manage a large number of accounts where some of the accounts have to be closed after the completion of cases - such as bankruptcy proceedings. From now on, there will be the option for these closed accounts to remain visible in Isabel 6 provided that your bank takes the necessary measures. This means that viewing details, printing statements and exporting these accounts will then still be possible.

Tip for optimum performance of Isabel 6

To obtain optimum performance from your Isabel 6 application we advise you to uncheck the setting '*Empty Temporary Internet Files Folder when browser is closed*' in your internet browser Internet Explorer.

Otherwise, your browser will download all of the images of the Isabel 6 application each time that you log on, which requires more time.

Take the following steps:

1. Go to the **Tools** menu in your browser Internet Explorer and click on **Internet Options**.
2. Select the final tab **Advanced**.
3. Uncheck the checkbox that is positioned before '*Empty Temporary Internet Files folder when browser is closed*' and click **OK**.

If you have any questions about using Isabel 6, please go to www.isabel.eu/support6. We wish you every success with Isabel 6.
