1. CHARACTER SETS

The ISO20022 standard allows for the full UTF-8 character set. Isabel too allows the complete UTF-8 set during the creation of transactions or in uploaded banking files.

In the upload of banking files, only the reduced character-set is supported:

```
a b c d e f g h i j k l m n o p q r s t u v w x y z
A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
0 1 2 3 4 5 6 7 8 9
/ - ? : ( ) . , ' +
```
[Space]

During the upload of CT banking files, specific fields get their special characters (for instance é) converted to the reduced character-set above (in this case e). The table below gives the conversions made by Isabel IBS 6 in those specific cases.

It is important to note that, when a conversion has taken place, the final result for a customer on screen in Isabel 6 is not the same as what he created or saw in the accounting package.

No specific conversion applies during the creation of transactions. However, some character-set restrictions do apply to specific fields.

The characters...	are converted to...
;	:
{	(
}	)
¿	?
À Á Â Ã Ä Å	A
Ç	C
È É Ê Ë	E
Ì Í Î Ï	I
